

Newsletter Prevas GCM October 2017

New release of Prevas GCM is deployed November 4th 2017

In November 2017 there is a new release of Prevas GCM. GS1 updates its specification for trade item information to version 3.1.3 and Prevas GCM is adapted to that version. This release contains new attributes, modules, code values and validation rules.

Among other things, there is a new module for Fish Products and three new attributes for sending trade item information to Systembolaget. More information about this will be in connection when the release is deployed.

Prevas GCM will be closed due to upgrades during 2017-11-03 16:00 - 2017-11-06 12:00.

Validoo Q-lab will be reviewing trade items with components from November 4th

GS1 recommends that composite trade items should be registered as components (without GTIN). Validoo Q-lab will review trade items with components in the future.

For example, a chocolate box with ten different kinds of chocolate, where each of them is specified on the packaging. Using components helps you to describe each variety individually.

Prevas GCM is already prepared for registering components.

New validation rule may require updating of existing trade item information

In the release there is a new validation rule that provides validation errors when T0187 **Data carrier family, code** is GS1 128 and T3748 **Application identifier type, code** misses value.

There are many customers using this code (GS1 128) in T0187 and where value is missing in T3748, which means that a large number of trade items will receive validation errors after the new release is deployed. Contact Prevas GCM support if you need help updating trade item information to avoid validation errors.

Errors

When Data carrier family type code (T0187) has the value 'GS1 128', Application identifier type code (T3748) has to have a value.

Additional features for Prevas GCM

• Send to receivers connected to GS1Trade Sync in Denmark

It is possible to register and send trade item information to receivers in Denmark.

Contact support for more information if you are interested in this and may want to test what this means for your business.

Recently Prevas have had contact with both GS1 Sweden and GS1 Denmark in order to allow quality review of trade information in GS1TradeExact without being registered in GS1TradeSync. It should be enough to be connected to one data pool such as Validoo Item and then send its trade item information to Danish receivers and also get a quality review of the trade item information.

Contact Prevas GCM support for more information if you are interested in sending to receivers in the Danish market and may want to test what it means for your company.

• Customization to send trade item information to Systembolaget

Systembolaget retrieves, from now on, its trade item information from Validoo Item and wants their suppliers to have their trade item information available there. Prevas GCM is adapted to meet

Systembolaget's requirements for trade item information.

- **Export trade item information to Dabas**

The function is available to export validated trade item information to Dabas. For customers connected to the service, Dabas could be chosen as receiver for trade item information in the creation of publications.

- **Import of trade item information to Prevas GCM**

Prevas has developed different customizations to import trade item information from business systems or other systems through XML, text or Excel formats. Please contact Prevas GCM support for further information.

Development of new functionality in Prevas GCM

Prevas has a great interest in helping Prevas GCM customers simplify their work on handling trade item information. We have long experience of customer-focused partnerships, integrations with surrounding systems and can develop new customized features in cooperation with customers according to their requirements and needs. Prevas has good contact with GS1 and participates in the GS1's user group for trade item information for information on current issues as well as providing feedback as a system vendor.

Please contact Prevas GCM support to discuss your specific needs.

Best regards, Prevas GCM support team
