

Innovation for Growth

Press release, 10/4/2017

New life science customer for Prevas

QuickCool has chosen Prevas as its software vendor prior to the final development phase and launch of their QuickCool® System. Prevas' local presence, technical expertise and experience in developing medical technology solutions were decisive when choosing a new partner.

Prevas will be playing an important role in QuickCool's continued development work. The first assignment will be to optimize, validate and verify the software for QuickCool® System prior to CE labeling and launch of the new product. Prevas will thereafter assist with maintenance services and further development of their future solutions.

"We've made a conscious decision to change our software vendor prior to the final phase of our development project," says Fredrik Radencrantz, managing director for QuickCool. "Our decision feels right both from the short- and long-term perspectives. The short-term benefits are many, including the fact that Prevas' project team will be working side-by-side with our own personnel, which feels both practical and more efficient. This will facilitate the software changes that we've planned and provide greater efficiency in our important work with validation and verification. There are many synergic benefits. Since we've even chosen Prevas as our supplier of maintenance services and for further development of our future systems and solutions, it also feels like a good long-term solution."

"We're very happy that QuickCool chose us as their partner for product development," says Patrick Buschow, regional manager at Prevas. "We always work in close collaboration with our customers, and with our life science services, we can also supply additional expertise in embedded systems and QA to QuickCool. Prevas has more than 30 years of experience in balancing new technology with proven technology when it comes to efficient ways of creating innovative products."

About Prevas

Prevas is a partner for companies in many industries. Our passion is resolving technical challenges in developing smart products and smart factories. With cutting-edge expertise in product development, embedded systems and industrial IT and automation, Prevas contributes innovative solutions and services that create growth. Prevas was founded in 1985 and is the primary supplier and development partner for leading companies in industries such as life science, telecommunications, automotive, defense, energy and engineering. Prevas has offices in Sweden, Denmark, Norway and India, and approximately 600 employees. Prevas has been listed on NASDAQ Stockholm since 1998. For more information about Prevas, visit www.prevas.se.

About QuickCool

QuickCool is a Swedish medical technology company with a business concept focused on saving lives and preventing brain damage upon acute brain ischemia (insufficient blood supply to the brain) by developing and providing a unique and globally patented cooling system, the QuickCool System. QuickCool is active in the rapidly growing market Targeted Temperature Management (TTM), for brain-protecting cooling treatment for patients with, for example, acute cardiac arrests and strokes. QuickCool's system protects the brain by cooling the nasal cavity and utilizing the natural heat exchanging capabilities of the nose. QuickCool's intranasal method provides gentle and continuous cooling treatment for both conscious and unconscious patients. The QuickCool share is listed on AktieTorget and the company conducts its operations at the Ideon Science Park in Lund. For more information, please see www.quickcool.se.
