

Innovation for Growth

Press release August 30, 2012

Prevas receives new major orders within life science

In Europe, Prevas has a leading position in the development of advanced medical devices for diagnostics and therapy. This is evidenced by the number of orders Prevas has received the past few months within the field of life science. The total value of the orders is approximately SEK 34 million.

At the end of Q2 and the beginning of Q3, Prevas signed several large and strategically important development contracts within the field of life science.

"Life science is an expansive field characterized by innovative and high tech devices and solutions. We are very pleased that customers continue to put their full faith in us within the field," says Robert Tönhardt, who is responsible for the Life Science Center of Excellence at Prevas.

Prevas' business is partially conducted at several "Centers of Excellence", which are focused on different customer groups and sectors. This type of focus has enabled Prevas to satisfy the growing and specific needs of the industry. In general, there is increasing demand for shorter development times, as well as improved quality, design and connection possibilities. Over the years, Prevas has developed several prize-winning products for customers in the Nordic Region, Europe and the U.S.

"We believe that true customer benefit is best achieved through in-depth understanding of the customer's business. Prevas' customers are spread out all over the world. As a means of helping them compete in a global market, we have set up a number of Centers of Excellence. At the Centers, customers are provided with specialist project teams with specific domain expertise and technical platforms that can be used to develop profitable, turnkey solutions," says Tönhardt.
