Prevas receives order from Tekniska verken in Linköping

Tekniska verken in Linköping needs to develop a modern system solution to make environmental and energy reporting future safe, and they will be getting help with this from Prevas. A modern technical platform will be jointly developed based on standardized products. Delivery will be during the autumn of 2015.

Prevas' delivery consists of a complete solution for environmental and energy reporting, implementation, service, maintenance, updates and system support. After commissioning, a 3-year support and maintenance assignment begins with an option for an additional two years.

“We've made a thorough preliminary study to produce and define our requirements for a new, modern and future-safe system for environmental and energy reporting regarding the production of heating, electricity and cooling at our facilities,” says Claes Vallin, process administrator for production and environmental follow-up. “A basic requirement is that we must be able to handle our monitoring and follow-up process in a common system.

“During procurement, Prevas has proven to be responsive to our requirements and they can also provide us with added value in their system solution. Prevas' system is strong in comparison with other providers' solutions and we're looking forward to interesting and exciting implementation together with Prevas.”

Prevas' system solution is based on a system integration of Prevas' two proven standard products – Prevas AutArch, for processing and presentation of high-resolution process data; and Prevas Mikon, for processing aggregated values with presentation and reporting. The system solution provides a modern modular platform with the capability to add more functions later to meet future needs.

“Prevas has delivered industrial IT solutions since 1985 and I'm exceedingly proud that in tough competition, Prevas has been entrusted to deliver this system solution,” says Torbjörn Johansson, regional manager at Prevas.
