

Innovation for Growth

Press release April 12, 2012

Prevas receives order from Arla Foods

Prevas has received an order from Arla Foods. A new and modern control system will be developed, and delivery is expected to be completed in December 2013. The value of the order is approximately SEK 14 million.

Arla Foods' factory in Vimmerby was opened in 2005 and currently produces milk powder from 350,000 metric tons of milk annually. The facility is expected to expand in the future, and Arla Foods needs to invest in a new and modern production-oriented IT system in order to cope with the planned growth. Prevas will help out.

"For us, it is important to invest in the future, especially in Sweden, in order to make a difference and offer customers, consumers, dairy farmers and employees added value. Prevas has both expertise and experience from similar IT projects," says Jörn Skovhauge at Arla.

The project includes software, system migration, quality assurance, installation, rollout, testing, training and support. As Arla's supplier, Prevas will guarantee the existence of locally based expertise during the course of the project and the years following rollout, including the possibility to supply support and service to maximize available production time.

"We are very pleased about Arla Food's increasing confidence in us. This type of assignment fits us like a glove. Our quality assurance working methods ensure that a complex rollout of Arla's systems can progress smoothly and correctly during the short and critical rollout periods," says Robert Majanen, Business Unit Manager at Prevas AB.

The Scandinavian food industry must constantly develop and improve its products and production in order to offer customers products with both the right price and quality. Or get help with the task. Prevas does everything it can to find effective solutions for customers.
