

## **Prevas automating Norway. Major order to Prevas.**

Prevas will be delivering new robotic and automation solutions to a company in the automotive industry. The undertaking includes new production lines with about 20 industrial robots and associated control of the plants.

To achieve increased production capacity and flexibility, four new production lines are being built.

Prevas has received full responsibility for project management, engineering, production, installation, programming and commissioning of the equipment.

“Prevas’ solid reputation, long-term collaboration and previously deliveries of similar assignments for customers have all paved the way for this order,” says Lars-Erik Forsberg, sales manager for robotic solutions at Prevas.

Delivery will extend through most of 2020 with a final partial delivery in the spring of 2021.

Since 1985, Prevas has met challenges and found opportunities in industries where demands are especially high. For efficient and sustainable manufacturing, for example, automation and robotics solutions are needed. Modern robotics solutions provide higher production rates and quality, less downtime and lower costs. Prevas has extensive experience from providing robotics solutions and systems for control and supervision of robot cells. We have resources in advanced robot programming both for new investment projects and for tuning of existing robot cells based on analyze to improve yield, cycle times and output.
